1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claim 7 is rejected under 35 U.S.C. 102(b) as being clearly anticipated by Boyd et al of record.

The sensor of Boyd is mounted proximate the barrier, as claimed, since the sensor does not penetrate completely through the barrier.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 8-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Boyd et al. Boyd discloses all of the claimed subject matter, note fig. 1, except for the specific shape of the magnet, the specific material of the magnet, the magnet being the winding core, the specific location of the winding core and the turbine blade. These features are considered obvious design considerations since they are old and known in the art.
